

INTOXICATE Poster Figures

Yash Jaggi

WCM EM Research Symposium · May 7, 2026

Figure 1. Exposure Category Counts by Biological Sex

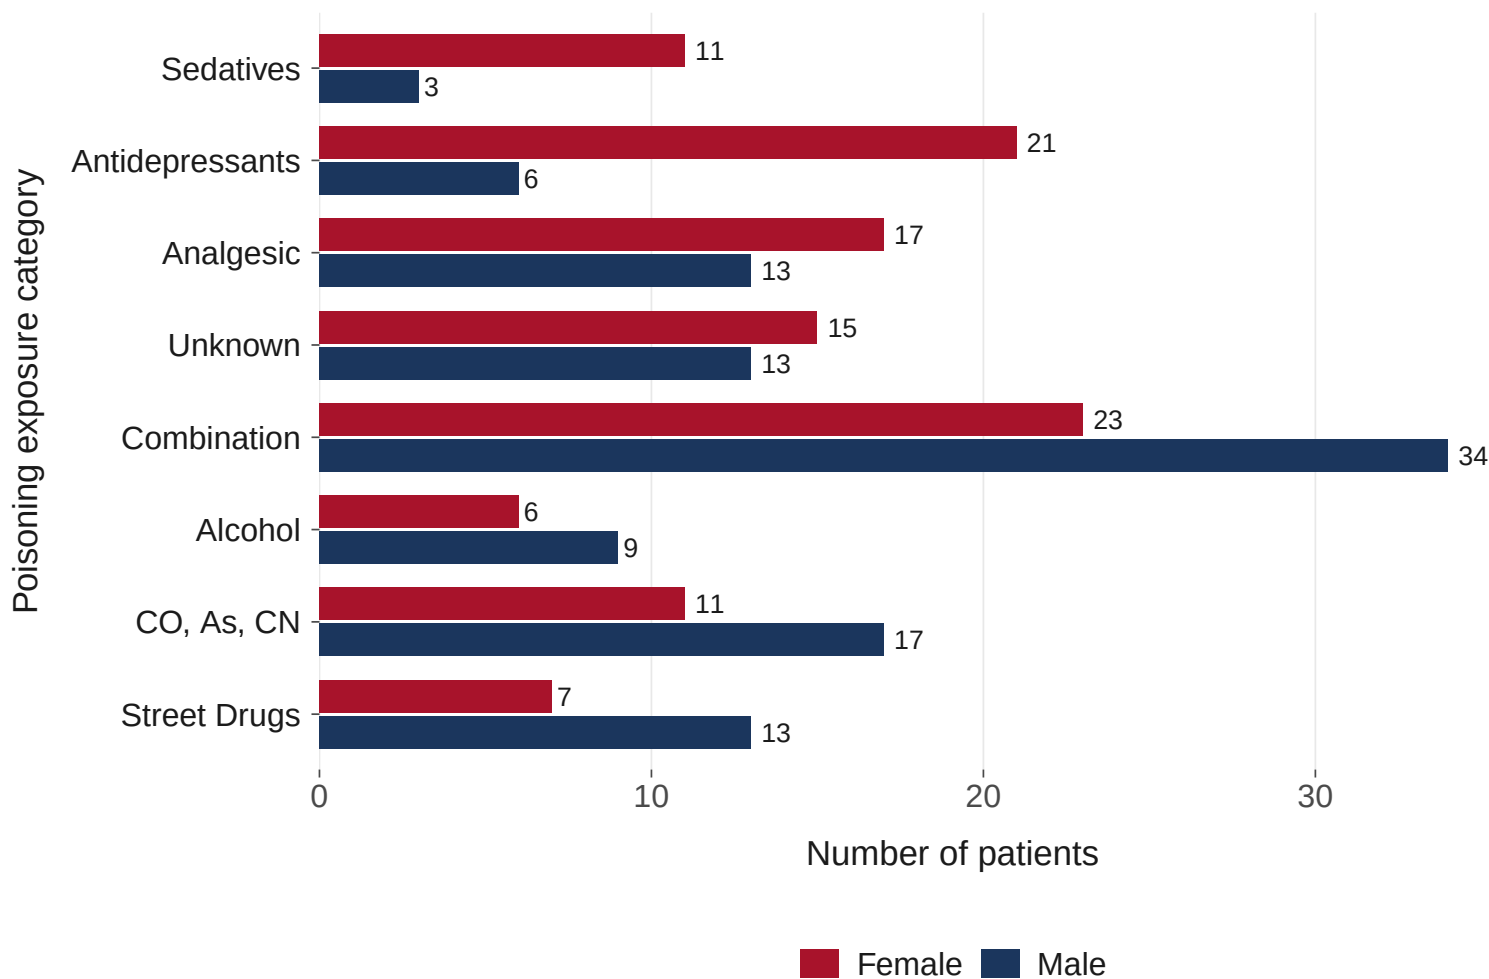

Figure 1. Number of female (maroon) and male (navy) patients in each poisoning exposure category. Categories ordered by descending female share. N = 219 patients (111 female, 108 male). Antidepressant exposures were predominantly female; street drug, CO/As/CN, and alcohol exposures were predominantly male. Chi-squared test of independence on the 8×2 table: $p = 0.007$.

Figure 2. INTOXICATE Score Distribution by Sex and ICU Outcome

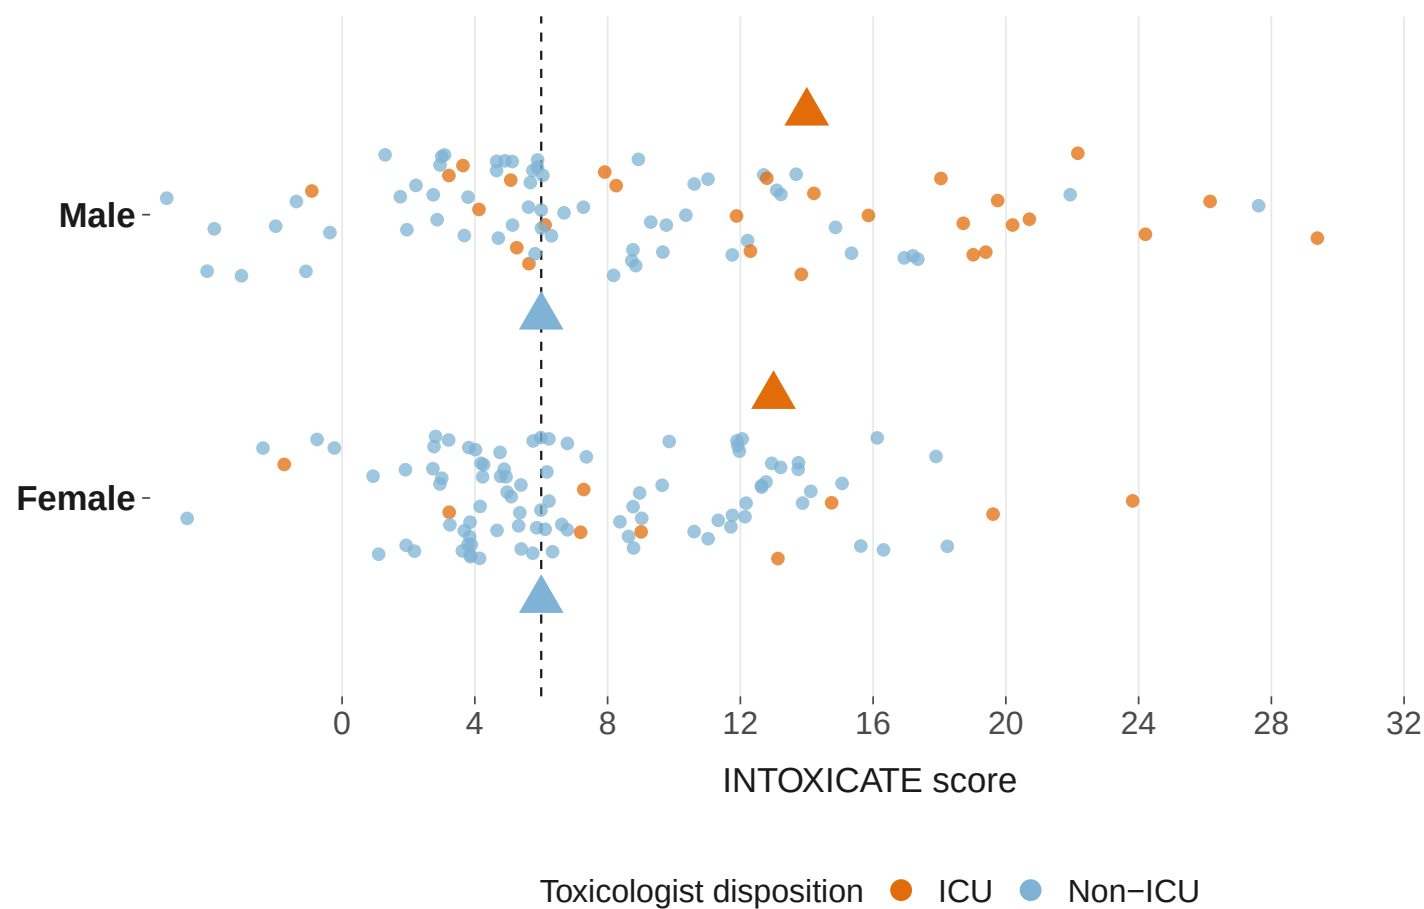

Figure 2. INTOXICATE score for each patient with complete data ($n = 189$), stratified by biological sex and colored by toxicologist disposition. Triangles mark group medians for ICU and non-ICU dispositions within each sex. The dashed line marks the original threshold of $IRS > 6$. 8 of 27 male patients (30%) with raw scores at or below the threshold ultimately required ICU-level care, motivating a sex-specific adjustment to the score.

Cohort statistics for poster Results section

Drop-in numbers for Results section:\

Of 254 enrolled patients, 219 were included (108 male, median age 38 [IQR 28–63]; 111 female, median age 29 [IQR 20–54]).\

Including biological sex increased sensitivity from 74% (95% CI 58–85%) to 89% (76–96%) and decreased specificity from 58% (50–65%) to 46% (38–54%).\

Male sex was associated with increased odds of ICU-level care (OR 3.64, 95% CI 1.60–8.83); biological sex was associated with exposure category (chi-squared $p = 0.007$) but not strongly collinear with model predictors ($VIF < 2$).\

Antidepressant exposures were more common in females (78% vs 22%). Street drugs (65%) and CO/As/CN exposures (61%) were more common in males.\

Sanity-check counts:\ Enrolled (non-empty rows): 254\ Included after exclusions: 219\ Excluded: 35\ With complete IRS data (used for model): 189\

Note: $n_{enrolled}$ is computed as the number of non-empty rows in the INTOXICATE sheet. If your registry's true enrollment count (before any data entry) lives elsewhere, override the printed sentence with the correct figure.
